

GOJO® LTX™ Dispensing System

EASY TO SERVICE. BUILT TO LAST.

GOJO is known for engineering the industry's most reliable, easy-to-service skin care systems. It's a legacy we're building upon with the unmatched dependability of the LTX dispensing system.

To ensure proper operation of your LTX Dispensing System, please review these simple measures:

After servicing the dispenser, it may take up to 30 seconds to properly activate once the cover is closed

- During this time, the dispenser is auto-calibrating to the surrounding lighting conditions in order to optimize performance
- This auto-calibration delay occurs only following opening and closing of the cover

Batteries must be installed correctly and the battery pull tab must be removed

- If there is no light on the front of the dispenser, check to see that the battery pull tab has been removed (pull tab has a red arrow and is located near the bottom-right battery)
- **Note** - For demonstration purposes, the battery pull tab can easily be placed back in its original location.
- If batteries are installed properly, the battery pull tab is removed, and there is no light on the front of the dispenser, then 4 new D alkaline batteries should be installed

The correct refill cartridge must be properly loaded

- A blinking green light on the front cover indicates the proper refill is loaded
- If the light on front of the dispenser is blinking red, check to make sure the correct refill is properly loaded into the dispenser

The dispenser cover must be closed properly

- Once batteries and the correct refill cartridge are properly in place, close the dispenser cover and press firmly until the cover clicks into place

The refill cartridge pump must be primed

- It may take 2-4 attempts before soap/sanitizer dispenses from a new refill

Hands must be located properly to activate the dispenser

- Position hand approximately two inches beneath the center of the dispenser to activate (see figure A)
- In order to avoid accidental dispensing of soap/sanitizer, the dispenser is designed to dispense product only when hands are placed in the proper location

For any additional questions, please contact:

- GOJO Customer Quality Center at 1-800-321-9647

LIGHT REFERENCE:

- **Blinking GREEN Light**
- dispenser ready
- **Blinking RED Light**
- refill issue (*no refill, wrong refill, non-functioning refill*)
- **Solid RED Light**
- insufficient power available
