# Single-Use HYPODERMIC NEEDLES

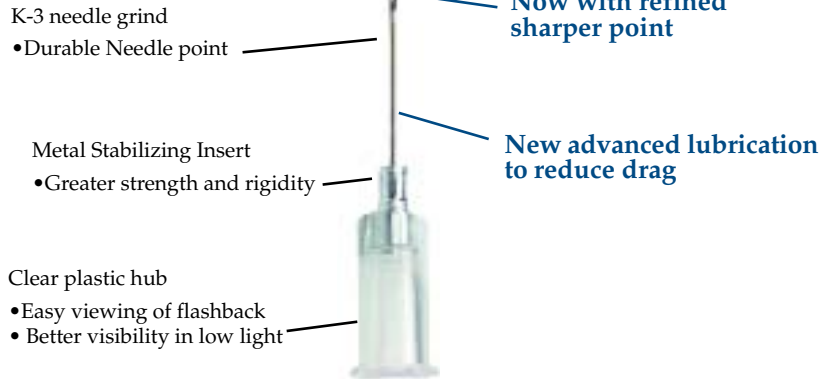

## MONOJECT™ Veterinary Sterile, Single Use Hypodermic Needle

- Specifically designed for veterinary use.
- Available in both luer slip and luer lock.
- Color-coded packaging for easy identification.
- Autoclavable in hard pack.
- Hard pack is great for field and ancillary use.

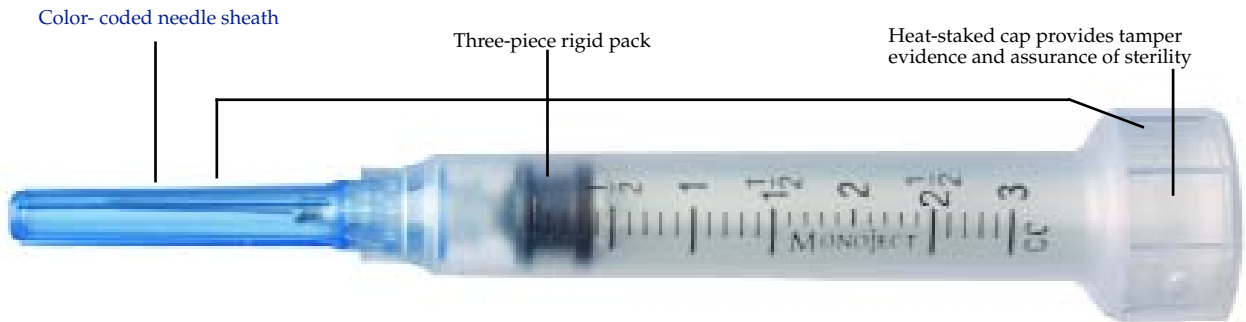

### Traditional Needle (Human Use)

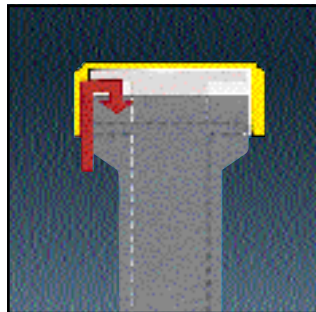

### Refined MONOJECT VETERINARY NEEDLE (Animal Use)

Optimum combination of sharpness and durability

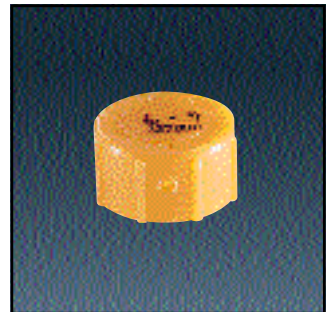

The rigid pack\* is completely autoclavable for use in hospital prepared O.R./procedure packs. If the rigid pack is not opened during the procedure, the unit can be returned for floor use.  
\*The 1/2, 3/10 and 1mL syringes are not auto-clavable.

Tortuous path\* (two sharp right turns) inhibits entrance of airborne bacteria and assures sterility in much the same way that CSR wrap functions to assure sterility.  
\* Pasteur Theory

For use in a sterile field environment, the rigid pack allows the Veterinarian/technician to transfer the combination needle and syringe or drop the syringe only into the sterile field.

Identifying information is imprinted on cap (lot number, product description).

# MONOJECT Hypodermic Needles and Syringes

The rigid pack is completely autoclavable for use in hospital prepared O.R./procedure packs. If the rigid pack is not opened during the procedure, the unit can be returned for floor use.

Heat stake provides tamper evidence. Intact heat stake is your assurance of sterility. To open, align heat stake downward away from face (eyes), body and patient. Break heat stake by twisting the cap or by applying a downward snap.

Use sheath as a wrench to attach needle to syringe.

### 1<sup>st</sup> Letter Explanation

Each page in the suture section of your catalog will show the following

information for each alpha numeric reorder code:

- Needle Picture of the actual needle.
- Length Indicates length in inches and centimeters. Also indicates the number of strands per package.
- Color Color of suture strand.
- Size Grid Indicates the U.S.P. size and metric size for each

### 2<sup>nd</sup> Letter Explanation

The first letter of the alpha code designates the primary surgical application of the product.

- C Closure - general use
- G Gastrointestinal
- V Vascular/Cardiovascular
- S Subcuticular - skin closure
- L Ligating Reels
- U Urology
- E Endoscopic

The second letter of the alpha code designates the type of suture material.

- L POLYSORB™ Coated Braided, LACTOMER™ 9-1 Synthetic Absorbable Suture
- M BIOSYN™ Monofilament GLYCOMER™ 631 Synthetic Absorbable Suture
- G SURGICAL GUT Plain Chromic and Mild Chromic Gut Suture
- S SOFSILK™ Coated, Braided Silk Suture
- N MONOSOF™ Monofilament Nylon Suture
- P SURGIPRO™ Monofilament Polypropylene Suture
- D SURGIDAC™ Coated, Braided or Uncoated Monofilament Polyester Suture
- C CAPROSYN™, Polyglytone™ 6211 Monofilament Synthetic Absorbable Suture
- DL DEXON™ II Polyglycolic Acid, Coated, Braided Synthetic Absorbable Suture
- DS DEXON™ S Polyglycolic Acid, Braided Uncoated Synthetic Absorbable Suture
- MM MAXON™ Polyglyconate Monofilament Synthetic Absorbable Suture
- PB NOVAFIL™ Monofilament Polybutester Suture
- BS SURGILON™ Coated, Braided Nylon Suture

Examples of 1<sup>st</sup> and 2<sup>nd</sup> Letter Coding System

- MM MAXON™ Polyglyconate Monofilament Synthetic Absorbable Suture
- PB NOVAFIL™ Monofilament Polybutester Suture
- BS SURGILON™ Coated, Braided Nylon Suture
- CD TI·CRON™ Coated, and Uncoated Braided Polyester Suture

CL-812

- C Denotes closure surgical application
- L Denotes POLYSORB™ suture material

All four digit numeric product codes represent premium needle-sutures utilized in Plastic Surgery or Ophthalmic/ Microsurgery.

Units Per Box

SN-1666

- S Denotes subcuticular or skin closure
- N Denotes MONOSOF™ monofilament nylon suture

In most instances, Syneture suture products are packaged 36 units per box. The exceptions to the above unit of sale are as follows:

- All Ophthalmic and Microsurgery products contain one dozen packets per box.
- All Ligating Reel products contain 24 packets per box.
- Product codes ending in suffix G are packaged one dozen packets per box.
- Product codes ending in M (Multipack) are packaged one dozen packets per box, with multiple strands in packet.

# Vial Venting System

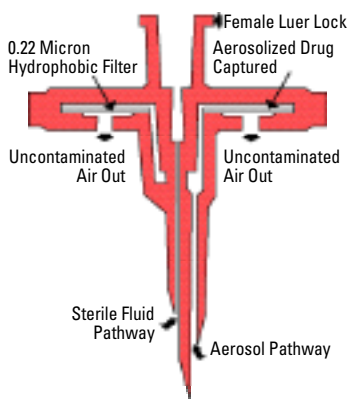

## ChemoBLOC Vial Venting System

A system designed to prevent aerosolization of chemotherapy and other hazardous drugs into the atmosphere during reconstitution.

- Single Use Only.
- Latex-Free.
- Can be used for reconstituting chemotherapy drugs, antibiotics, and other hazardous drugs.
- 22 micron hydrophobic filter to safely remove any aerosolized drugs.
- Safe, needleless system prevents needle sticks.
- Unique cannula is easy to insert.
- Facilitates rapid transfer of solution.
- Sterile, non-pyrogenic fluid path.
- Luer Lock connection insures secure, safe connection to syringe.

Code	Description	Qty / Case
DP5201V	Vial Venting Chemotherapy Pin	50/box, 4 boxes/case

## Preventing Aerosolization: Recommended Instructions For Use

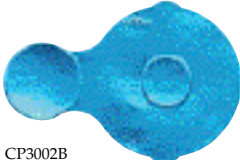

1. Remove white screw cap and set to side for future use. Attach syringe to luer lock on CHEMOBLOC Vial Venting Spike. With vial in an upright position, insert chemo spike/syringe into vial in a downward motion.
2. Invert vial and begin to slowly withdraw diluent. Bubbles of sterile air can be seen rising in diluent.
3. When syringe is approximately 1/2 full, eject any unwanted air back into diluent vial. Resume withdrawing until desired volume of diluent is in syringe.
4. Invert vial again, so that vial is in an upright position. Remove the spike/syringe from vial.
5. Place vial, containing powder chemo drug, in an upright position on a flat surface. Insert syringe/spike in a downward motion.
6. "Slowly" disperse diluent into vial containing drug concentrate, while maintaining a downward motion.
7. Gently rotate vial, with syringe/spike still attached, to properly mix drug. (Refer to drug manufacturer's directions for more specific information on mixing individual drugs.)
8. Invert vial again (so that it is now positioned above syringe) and "slowly" begin to withdraw reconstituted chemo drug.  
*Note: Injecting large amounts of air while holding vial above syringe may wet the hydrophobic filter and hamper venting action.*
9. Carefully disconnect syringe from spike/vial. Carefully reattach white screw cap to top inlet of chemo spike.
10. Discard capped CHEMOBLOC vial venting spike into proper hazardous waste container.
11. Follow manufacturer's instructions concerning application of chemo drugs.
